

# Trinity River mainstem redd survey update

## 09/20/2011

The [Arcata Fish and Wildlife Office](#) along with the [California Department of Fish and Game](#), [Yurok Tribal Fisheries Program](#), [Hoopa Valley Tribal Fisheries Department](#), and [Shasta-Trinity National Forest](#) survey the mainstem Trinity River to recover salmonid carcasses and count and map Chinook salmon (*Oncorhynchus tshawytscha*) redds. The distribution of Chinook salmon redds is expected to change in response to rehabilitation efforts of the [Trinity River Restoration Program](#), and the relative run size of natural vs. [Trinity River Hatchery](#) origin fish. Redd and carcass surveys are conducted weekly on the River between [Lewiston Dam](#) and the North Fork Trinity River (Reaches 1 through 7), and are conducted every other week on the Reaches downstream of the North Fork Trinity River ([link to map](#)).

This update provides preliminary data on 2011 redd counts encountered and entered into our database as of 09/17/2011 (Table 1). Figure 1 compares preliminary 2011 cumulative redd counts for Reaches 1-10 with the previous 9 years (2002-2010). Redds constructed by Chinook and coho salmon are not differentiated. Numbers are later adjusted for Chinook salmon of hatchery and natural origin using data provided by California Department of Fish and Game.

**Table 1. Preliminary count of redds by logistic reach for the fall 2011 mainstem Trinity River redd survey. "NS" = not surveyed. Reach 11 not surveyed due to extreme whitewater (Burnt Ranch Gorge). These data are preliminary and subject to revision.**

Week start	Reach														Total
